

7.1.2

a) e-productions

$$\begin{aligned} S &\rightarrow OAO | OO | 1B1 | 11 | BB \\ A &\rightarrow C \\ B &\rightarrow S | A \\ C &\rightarrow S \end{aligned}$$
NOTE: $C \rightarrow E \Rightarrow A \rightarrow E \Rightarrow B \rightarrow E$

b) unit productions

$$\begin{aligned} S &\rightarrow OAO | OO | 1B1 | 11 | BB \\ A &\rightarrow OAO | OO | 1B1 | 11 | BB \\ B &\rightarrow OAO | OO | 1B1 | 11 | BB \end{aligned}$$
NOTE: $A \rightarrow C \rightarrow S \rightarrow \dots$ $B \rightarrow S \rightarrow \dots$ $B \rightarrow A \rightarrow C \rightarrow S \rightarrow \dots$ c) useless states \rightarrow remove S production.d) $A \rightarrow FD | DD | GE | EE | BB$ $B \rightarrow FD | DD | GE | EE | BB$ $D \rightarrow O$ $E \rightarrow 1$ $F \rightarrow DA$ $G \rightarrow EB$ 7.1.4

a) e-productions

$$\begin{aligned} S &\rightarrow AAA \\ A &\rightarrow aA | a \end{aligned}$$
b) unit productions \rightarrow No!c) useless states \rightarrow No!d) $S \rightarrow CA$ $A \rightarrow DA | a$ $C \rightarrow AA$ $D \rightarrow a$ 7.4.3

b) baaab

 $S \rightarrow AB \rightarrow BAB \rightarrow bAB \rightarrow bBAB \rightarrow bCCAB$ \downarrow
 $baaab \in L$

c) aabab

 $S \rightarrow BC \rightarrow CCC \rightarrow aAB \rightarrow aBAB \rightarrow aabab \in L$ First question:

Right linear:

left linear:

• Take the reverse

 $A \rightarrow aB$ $A \rightarrow a$

• Draw

• Reverse

7.2.1b) $\{a^n b^n c^n \mid n \geq 0\}$ $z = a^{n+1} b^{n+1} c^n \in L \quad z = uvwxy$ $|vwx| \leq n$ soi) $vwx = a^k$ or b^k or c^k where $0 < k \leq n$ ii) $vwx = a^i b^j$ or $vwx = b^i c^j$ where $0 < i+j \leq n$

According to PL:

 $q := |vwx| > 0$ so,if (i) holds, $uwv = a^{n+1-q} b^{n+1} c^n \quad n+1-q \neq n+1 \notin L$ if (ii) holds, $uwv = a^{n+1-q_1} b^{n+1-q_2} c^n \notin L$ since $q_1 + q_2 = q > 0$ c) $\{0^p \mid p \text{ is a prime}\}$ consider some prime $p \geq n+2$, let $w = 1^p$ $z = uvwxy \rightarrow |vwx| \leq n$
 $\rightarrow |vwx| > 0$ $|vwx| = m \quad |vx| = q \quad |uwv| = p-q$ $uv^iwx^iy = p-q + i \cdot q = p-q + (p-q)q = (q+1)(p-q)$
 $i = p-q$ \downarrow
it has
two factors \rightarrow not a prime $\rightarrow \notin L$
