Problem 1

a) $\dim \mathbb{R}^3 = 3$ and $|S| = 3$

$\Rightarrow$ S will form a basis for $\mathbb{R}^3 \Leftrightarrow$ S is linearly independent.

$\Leftrightarrow \boxed{c_1v_1 + c_2v_2 + c_3v_3 = 0 \Rightarrow c_1 = c_2 = c_3 = 0}$

$\Rightarrow c_1(t,-3,2) + c_2(0,1,1) + c_3(4,1,t) = 0$

$$\begin{bmatrix} t & 0 & 4 \\ -3 & 1 & 1 \\ 2 & 1 & t \end{bmatrix}\begin{bmatrix} c_1 \\ c_2 \\ c_3 \end{bmatrix} = \begin{bmatrix} 0 \\ 0 \\ 0 \end{bmatrix}$$

It has only the trivial solution if and only if A is invertible ($Ax=0$) ($\det A \neq 0$)

expansion along the 2^{nd} column

$$\det A = \begin{vmatrix} t & 0 & 4 \\ -3 & 1 & 1 \\ 2 & 1 & t \end{vmatrix} = \cancel{\underbrace{a_{12}}_{0} C_{12}} + \underbrace{a_{22}}_{1} C_{22} + \underbrace{a_{32}}_{1} C_{32} = (-1)^{2+2}\begin{vmatrix} t & 4 \\ 2 & t \end{vmatrix} + (-1)^{3+2}\begin{vmatrix} t & 4 \\ -3 & 1 \end{vmatrix}$$

$$= t^2 - 8 + (-1)(t+12) = t^2 - t - 20 \neq 0$$

$$(t-5)(t+4) \neq 0$$

$$t \neq 5 \quad t \neq -4$$

Conclusion: S will form a basis of $\mathbb{R}^3$ if and only if $t \in \mathbb{R} - \{-4, 5\}$ //

b) By part a), $\dim(W) = \dim(\mathbb{R}^3) = 3$ if $t \in \mathbb{R} - \{-4,5\}$

If $t = -4 \Rightarrow W = \langle v_1, v_2, v_3 \rangle = \langle (-4,-3,2), (0,1,1), (4,1,-4) \rangle = \langle \overbrace{(-4,-3,2), (4,1,-4)}^{L.I.} \rangle$

$(-4,-3,2) + (4,1,-4) = -2(0,1,1) \Rightarrow (0,1,1)$ redundant

$\Rightarrow W = \langle (-4,-3,2), (4,1,-4) \rangle$ forms a basis for $W \Rightarrow \dim W = 2$ if $t = -4$

If $t = 5 \Rightarrow W = \langle v_1, v_2, v_3 \rangle = \langle (5,-3,2), (0,1,1), (4,1,5) \rangle = \langle (5,-3,2), (4,1,5) \rangle$

$-4(5,-3,2) + 5(4,1,5) = 17(0,1,1) \Rightarrow (0,1,1)$ is redundant

$\Rightarrow W = \langle (5,-3,2), (4,1,5) \rangle$ forms a basis for $W \Rightarrow \dim W = 2$ if $t = 5$

expansion along the 3rd row

$$= (\lambda+3)(\lambda^2 - 8\lambda - 33)$$

$$P_T(\lambda) = (\lambda+3)^2 \overset{\det<0}{(\lambda^2 - 8\lambda - 33)} = 0 \Leftarrow$$

$\hookrightarrow \lambda = -3 \rightarrow AM(-3) = 2$

---

c) $P_T(\lambda) = P_{[T]_B}(\lambda)$ where B is any basis of V. Because characteristic polynomial is independent of the choice of basis B of V.
